

1 **ABSTRACT OF THE DISCLOSURE**

2 A direction control device for a ceiling fan has a direction control circuit
3 arranged in a switch box of the ceiling fan and a remote receiver placed in a place
4 exterior of the ceiling fan. Conducting wires are electrically connected between
5 the direction control circuit and a set of connectors retained inside the switch box.
6 With the aforementioned arrangement, control signals received by the remote
7 control are sent to the direction control circuit through said wires and connectors
8 to determine the rotation direction of the ceiling fan. Further, since the direction
9 control circuit is placed inside the switch box of the ceiling fan, the installing
10 process of the direction control device is simple.
